1 Tutorial 1

Exercise 1.1: For each of the following statements, indicate whether it is Write or Wrong. If the statement is Wrong, briefly explain the reason.

- 1.1.1 With no data, there is no statistics.
- 1.1.2 Statistics is only about calculating averages and percentages.
- 1.1.3 You can make informed decisions without analyzing data.
- 1.1.4 If data is poorly collected, statistical results can be misleading.
- 1.1.5 Statistics is the science of making sense of data.
- 1.1.6 Statistics can be done without interpreting the results.
- 1.1.7 Data must always be organized before it can be analyzed statistically.
- 1.1.8 Without proper presentation of results, statistical findings can be misunderstood.

Exercise 2: Provide examples of research projects that use (a) only structured data, (b) only unstructured data, and (c) a combination of both.
